

Nameserver

How can I forward a domain to an IP address (A/AAAA record)?

Of course it is possible to forward a domain to an IP address. To set an A record please follow the subsequent steps:

Alternative 1:

1. Log into the customer area.
2. Choose the menu item "Domain" and then "Domain List".
3. Choose "Forwarding" next to the respective domain name.
4. Click on the tab IP address and enter the IP address into the field "IP address".
5. By clicking on "Update" the A records will automatically be created.

Alternative 2:

Click on "Nameserver" on the left side of the customer area and then on the modify button of the respective domain. If A/AAAA(IPv6) records already exist, you can modify those.

To create new A/AAAA records, please follow the subsequent steps:

1. Click on "Add DNS entry".
2. Leave the "Name" field empty.
3. Choose A or AAAA(IPv6) as type.
4. Enter the IP address of the server into the field value.
5. To Conclude the modifications, click on save.
