

# Nameserver

## How can I set up a forwarding as a standard for registering/transferring?

You can set a default value where a domain should forward to after registering/transfer.

1. Login to your personal customer area.
2. Click on the menu item "Settings" → "Default settings"
3. Choose the Tab "Nameserver".
4. You can set a value for Web- and Mailserver. IP addresses for A records/MX records or already existing Internet addresses for an URL forwarding. The master IP address is only needed if you use us as Secondary-DNS.
5. Click on "Save".

For future orders the default settings will be used until you change Nameserver settings in the shopping cart.
