For what do I need a SPF record?

SPF stands for Sender Policy Framework. The purpose of SPF records is preventing forgery of the senders address of e-mails. The domain owner can set this record to permit the **ips** or servers that can send e-mails with this domain.

You can find information about how to set up a SPF record [here](#).

If you have booked a hosting package with us, you can find further information how to set up a SPF record [here](#).
