

Transfer

How do I perform an internal transfer?

If domains are already registered with us in another account you can make an internal transfer.

Therefore, log into the current account and click on the tab "Prepare for Outgoing Transfer" under the menu option "Domain Transfer". Then enter the relevant domain name. Afterwards an AUTHCode will be displayed. With the AUTHCode the transfer can be initiated in the destination account.

During an internal transfer the term of your domain will be taken over, so that the remaining term will not be lost. The domain will not be renewed until its renewal date. There will be no additional costs.

Please note: Your e-mail accounts, webspace contents and databases will not be transferred during an internal domain transfer. Please back up these data before the transfer if you need them further.

All nameserver settings of the relevant domain will also be taken over.

Please note, that there will be no automatic change of the current owner data.
