

# Transfer

## **I took over my previous nameservers during the transfer and would now like to use the INWX nameservers.**

If you leave the option "Do not change current nameserver" activated in the "Nameserver" tab in the shopping cart during a transfer, the previous name servers will be retained. The entries of these external name server then apply. Therefore all of the nameserver entries stored in our own INWX nameservers will have no effect.

If you would like to change this and use our nameservers in the future, you must update the domain to our nameservers. You can then make and use the entries in our nameserver.

You can find out how to update to our nameservers [here](#).
