

# Transfer

## How can I request the AUTHCode for a .PT domain?

The AUTHCode for .PT domains can not be called up via our customer area. You will receive the code directly from the registration office. To do this, please carry out the following steps:

1. Please log in to <https://registo.dns.pt/en/home>.
2. Click on "My Domains"
3. Click the "Transfer Domain Management" button in the "Related Entities" area.

The AUTH code is then displayed and sent to the email address stored in the whois data.

If you do not know your login details, go to <https://registo.dns.pt/en/forgetpass>. Enter the user or the Nic handle. If you do not know this information, click on "Recover Password through the Taxpayer No.". In this case, enter your country and the tax number used for registration. The domain owner then receives the access data to the email address stored in the owner data. This e-mail address can be found in whois. There is also a link in the email and clicking that link will also show the Nic Handle.

Unique solution ID: #1301
